"One app, both platforms — built, shipped, and actually maintained."

WHY REACT NATIVE

One codebase for both iOS and Android means lower cost and faster delivery than building native apps twice — without compromising on real app performance. This is a genuine app, not a website wrapped in a shell.

PACKAGES

Basic

₹30k–55k*

- Simple app, up to 5–6 screens
- Local data storage (no backend needed)
- Clean, functional UI

Best for: MVPs, simple utility apps, internal tools

Timeline: 3–4 weeks

Standard

₹65k–1.1L*

- Full app with custom backend (Node.js)
- User authentication
- Push notifications
- Database-driven (real data, not mocked)

Best for: booking apps, community apps, service apps needing real users & data

Timeline: 6–8 weeks

POPULAR

Premium

₹1.2L+*

- Complex, feature-rich app
- Real-time features (chat, live updates, sockets)
- Multiple third-party integrations (payments, maps, etc.)
- Admin dashboard to manage app data
- 30 days post-launch support

Best for: startups building a real product, not just an MVP

Timeline: 10–14 weeks (scoped per project)

EVERY PACKAGE INCLUDES

iOS + Android from one codebase

1 round of revisions

App store submission guidance

Source code ownership — it's your app, not locked to me

PROCESS

01

Discovery call

Scope the app, screens, and features

02

Design / wireframe review

You approve the flow before development

03

Build

Development with regular progress updates

04

Launch

App store submission support + handover

WHY WORK WITH ME

I've shipped a production healthcare app with real-time features, plus a self-built app live on the Play Store — owning everything end to end: architecture, UI, backend, and deployment. When you work with me, you talk directly to the person building and maintaining your app: no project manager relaying messages.

* Price ranges are indicative — final quote depends on the specific scope of your project.

Let's build your app.
